

ABOUT ME

Computer Science graduate with hands-on experience building full-stack web applications and AI-integrated tools, including Django-based e-commerce platforms, machine learning prediction pipelines, and multi-agent AI systems. Strong foundation in Python, Java, and web development, with practical exposure to model evaluation, workflow automation, and generative AI integration. Seeking an entry-level Full-Stack Developer or Software Developer role to apply and grow these skills in a professional environment.

EDUCATION

BACHELOR OF SCIENCE (B.SC.) – COMPUTER SCIENCE

2023-2026

Dr. Vishwanath Karad MIT World Peace University, Pune

SKILL

- Languages** : Python, Java (Core & Advanced), C, C++, R
- Databases & DS**: SQLite, SQL, Data Structures
- Web Technologies**: Django, Flask, HTML, CSS, JavaScript, Firebase
- Machine Learning**: Scikit-learn, Pandas, SMOTE, Data Analysis, EDA
- Tools & Platforms**: Git/GitHub, Google Gemini API, n8n, Tesseract OCR, VS Code

PROJECTS

Heart Stroke Prediction | Python, Scikit-learn, Pandas

Aug 2025 – Nov 2025

- Built an end-to-end ML pipeline to predict stroke risk using the Kaggle Healthcare Stroke Dataset, including data cleaning, imputation, and EDA.
- Addressed severe class imbalance (~4.8% positive cases) using SMOTE, and built a preprocessing pipeline with Scikit-learn's ColumnTransformer.
- Trained and compared Logistic Regression, Decision Tree, and Random Forest models; identified that Random Forest's 91.3% accuracy came with lower balanced accuracy, while Logistic Regression (77.4% balanced accuracy) was more reliable at catching true stroke cases.

AI-Powered Productivity Assistant | Python, Flask, n8n, Google Gemini API, SQLite | github.com/prabs1178/productivity_assistant

Jan 2026 – Apr 2026

- Built a multi-agent AI web application that automates email management, task extraction, and daily productivity reporting, as part of a 2-person team under faculty guidance.
- Designed an automated pipeline using n8n to poll Gmail via OAuth2 and route data through a Flask backend exposed via ngrok.
- Implemented six specialized agents (email, summary, task, meeting, insight, reporting) powered by Google Gemini 1.5 Flash for summarization and structured data extraction.

HealthAI – AI-Powered Healthcare Assistant | Python, Flask, Tesseract OCR, Google Gemini API, SQLite | github.com/prabs1178/healthai-assistant

Jan 2026 – Apr 2026

- Built a full-stack web application that uses OCR (Tesseract + PyMuPDF) and Google Gemini 1.5 to interpret medical lab reports into plain-language health summaries and specialist recommendations.
- Implemented medication compliance tracking, appointment scheduling with tiered notifications, and a nearby doctor finder using the Overpass API and geolocation.
- Added a conversational AI health assistant with rule-based fallback logic and multi-language support (English, Hindi, Marathi, Gujarati).
